IS CASH THE ANSWER FOR SCHOOL REFORM?

"Just as the city has many construction projects going on, at least for a while the Buffalo Public Schools will be under construction. And as always, whenever you're in a construction zone, put on a hard hat." - New Buffalo School Superintendent Kriner Cash

**Drug OK'd to enhance female libido**

*FDA approval of Addyi seen as gender-bias win*

**Buffalo School Superintendent's To-Do List**
- Come up with turnaround plans for schools in state receivership
- Evaluate leaders at Central Office and at school level
- Rile alien teacher evaluation agreement
- Negotiate new contract with Buffalo Teachers Federation
- Open more schools in good standing
- Figure out how to reduce class sizes
- Build School Board consensus
- Execute plan for more racial diversity in criteria schools

**New superintendent has support for agenda from board, Albany**

A reform-centric state education commissioner holds unprecedented power in Albany.

The majority bloc on the Buffalo School Board shares the same ideas for school turnarounds.

And now, a man with a national reputation as a school reformer is running the Buffalo Public Schools, at the recommendation of the commissioner. Elections typically drive the agenda for the Buffalo Public Schools, and the board majorities that come and go are based on the current politics of the city.

But as the final piece of the school leadership puzzle falls into place, some believe the appointment of Kriner Cash as Buffalo school superintendent on Wednesday—coupled with a new receivership law—ensures a reform agenda for years to come, regardless of what happens in next board election.
The biggest breakthrough for women's sexual health since the pill

Since the 1960s, the medical community has been working to improve the lives of women by developing new treatments and technologies. However, there have been limited breakthroughs in women's sexual health. That is, until now. A new drug, called Sprout, has been approved by the FDA, and it promises to revolutionize the way we think about women's sexual health.

Sprout is a drug that helps women with hypoactive sexual desire disorder (HSDD), a condition that affects up to 15% of women. It works by increasing blood flow to the clitoris, which can lead to increased sexual desire and improved sexual function.

The approval of Sprout is a significant milestone in women's sexual health. It is the first drug specifically approved for use in women with HSDD. It is also the first drug to be approved for use in a major area of women's health that has been largely ignored by the medical community.

The approval of Sprout is also a victory for women's rights. For too long, women have been ignored by the medical community, and their experiences have been overlooked. The approval of Sprout is a step towards making sure that women's needs are being met.

Sprout has been the subject of intense scrutiny, with some critics claiming that it is not effective and that it has too many side effects. However, the approval of Sprout is a testament to the power of science and the dedication of those who have worked tirelessly to bring this breakthrough to women.

The approval of Sprout is a significant step towards making sure that women's sexual health is being met. It is a step towards making sure that women's voices are being heard and that their needs are being met.

The approval of Sprout is a victory for women's rights, and it is a reminder that science can be used to improve the lives of women. It is a victory that should be celebrated.

In summary, the approval of Sprout is a significant milestone in women's sexual health. It is a victory for women's rights, and it is a testament to the power of science. It is a step towards making sure that women's needs are being met, and it is a reminder that science can be used to improve the lives of women.
